2	A3	A3	51	26	4	30	62	aspen (upland)	immature	N		20-29 years	0	
comnts Fmd : There is some merchantable timber but all is far from mature.														
3	M6	M1	131		10	90	58	northern hardwood	unevenaged	N		10-19 years	0	
4	A3	F1	49	4	1	0	62	aspen (upland)	immature	N		50-59 years	0	
comnts Fmd : White Pine along the edge of the tamarack stand. Very steep hills throughout this area.														
5	A6	A2	19	28	8	90	60	aspen (upland)	two aged	N		10-19 years	0	
<u>Treatment Limiting Factors:</u> Delayed treatment for age/size class diversity														
comnts Fmd : There is younger aspen mixed throughout stand. Could be cut but with other stands proposed, this should be left for age class diversity and also with the river and lake there, the stand would be smaller. There are two ages with 1927 being one and around 1960. There is no evidence of a sale in the records but it is quite evident on the ground.														
6	A5	F1	28	78	9	60	55	aspen (upland)	mature	Y	final harvest	within 0-9 years	1	
<u>Treatment Limiting Factors:</u> Road needed (resources not presently available) Too wet														
comnts Fmd : Access would be through natural area or across the creek and around Spring Lake and through private or across the river and the span is quite wide. The stand is converting to conifer and has many frost pocket type holes that would be inaccessible and do not really have volume to speak of. Some jack pine mixed here and there but not really a jack pine site. This could be left to be with the proposed Reserve area since it is on the other side of the river.														
7	F5	F2	13	78	8	60	55	spruce-fir (uplands-including upland black spruce)	mature	Y		10-19 years	0	
<u>Treatment Limiting Factors:</u> Blocked by other physical obstacle Too wet														
comnts Fmd : Access is a problem and after Fence river buffer was put in there would not be much land left and the volume is not that good.														
8	A3	G0	248	14	1	0	63	aspen (upland)	immature	N		50-59 years	0	
comnts Fmd : Road to Spring Lake is open but others are mostly bermed														
9	Q5	F1	31	77	6	60	47	mixed swamp conifer	mature	N		not scheduled	0	
<u>Treatment Limiting Factors:</u> Too steep														
comnts Fmd : EDGES CUT WITH ADJACENT TIMBER SALE. What could be cut, was.														
10	A6	F1	19	76	10	70	63	aspen (upland)	mature	Y	final harvest	within 0-9 years	1	
comnts Fmd : Very steep hills. Has Spring Lake on the west and Michigan Creek on the south but it probably could be cut with caution.
