1	M 6	M 1	8		8	110	60	northern hardwood	immature	N		10-19 years	0	
comnts Fmd : West half of stand is on a rock top with thin soil and poor trees. Stand has scattered clumps of Hemlock and scattered big old trees. Good wildlife potential. The aspen is big, old and has high defect and most of it has blown down.														
2	A 3	A 0	267	30	3	0	60	aspen (upland)	immature	N		30-39 years	0	
comnts Fmd : This stand has scatted W pine, Hemlock and hardwoods. It is regenerating to heavy conifers including W. pine, R pine, spruce and fir. The topography has many small rock outcrops which were inaccessible by past harvest, so there is residual hardwoods and conifers in older age classes.

comnts Fmd : Highly variable stand with scattered old Pine. Stand has numerous rock outcrops with older residual timber on the tops. This stand has potential to manage for W pine and aspen in the future. The pines are regenerating well under the aspen. Dense conifer regeneration covers much of this stand.

comnts Fmd : This stand should be about half spruce fir when mature. I included the past stand in the Northeast portion. It was two aged and now most of the old aspen is down. It now , though wet, is similar to the rest of stand 16. It appears that there are vernal ponds in the Northeast portion of this stand.
