<p>comnts Fmd : THIS IS A FAIRLY NICE STAND OF CEDAR - MUCH NICER THAN STAND #34 FURTHER TO THE EAST. THE WEST EDGE HAS SOME HARDWOOD MIXED IN. THE WEST EDGE HAS ALSO EXPERIENCED SOME RECENT BLOW DOWN ALONG THE BORDER OF STAND #2.</p>

SOME RECENT BLOWDOWN HAS OCCURRED ALONG THE WEST EDGE ADJACENT TO STAND #6. THE STAND COULD TECHNICALLY BE HARVESTED BUT I WOULD PREFER TO LEAVE AS IS SINCE IT PROVIDES GOOD WILDLIFE COVER IMMEDIATELY ADJACENT TO A LARGE LOWLAND BRUSH COMPLEX (STAND#6).</p>

comnts Fmd : SIMILAR TO THE TAG ALDER STAND ADJACENT EXCEPT THAT THIS STAND DOES HAVE SOME POOR QUALITY MERCHANTABLE TIMBER.														
12	A 4	A 3	25	27	4	20	55	aspen (upland)	immature	N		30-39 years	0	
comnts Fmd : THIS STAND WAS CUT IN THE WINTER OF 1980 - 1981. THIS STAND IS QUITE MOIST WITH OBVIOUS RUTS REMAINING FROM THE HARVEST OPERATION. QUITE A LOT OF FIR WAS LEFT AS RESIDUAL DURING THE HARVEST ESPECIALLY ALONG THE EASTERN EDGE OF THE STAND. THE REGEN IS DOING GOOD BUT NOT AS WELL AS THE ADJACENT STAND #16 WHICH WAS ALSO CUT AT ABOUT THE SAME TIME.														
13	M 6	F 2	7	70	8	70	55	northern hardwood	mature	N		not scheduled	0	
comnts Fmd : THIS STAND LIES ON A NORTHWEST FACING SIDE HILL THAT LEADS DOWN TO ADAIR CREEK. DO NOT MANAGED THIS STAND AS IT SERVES TO PROTECT THE SLOPE.

comnts Fmd : NICE LITTLE POCKET OF LOW DENSITY NORTHERN HARDWOOD POLETIMBER. IT IS NOT GREAT QUALITY BUT IT SHOULD STILL BE SELECTIVELY MANAGED. NO TREATMENT IS WARRANTED THOUGH AT THE CURRENT TIME.														
15	A 6	M 2	10	38	7	80	55	aspen (upland)	immature	N	final harvest	within 0-9 years	1	
comnts Fmd : RECORDS INDICATE THAT THIS STAND WAS PROBABLY CUT IN 1968 - 1970. IF SO A LOT OF RESIDUAL MUST HAVE BEEN LEFT AS THERE IS SCATTERED MATURE ASPEN, FIR AND PINE ALL THROUGHOUT. I WOULD LIKE TO CUT IT NOW IN ORDER TO ESTABLISH ANOTHER ASPEN AGE CLASS. REGEN SHOULD COME BACK WELL TO A MIXTURE OF ASPEN, MAPLE AND FIR. ***RETENTION - I WOULD RECOMMEND LEAVING NO RETENTION DUE TO THE SMALL OVERALL ACREAGE AND THE NARROW ORIENTATION OF THE STAND***

comnts Fmd : THIS STAND WAS CUT IN 1981 - 1982. THIS IS DEFINITLY AN UPLAND STAND AS COMPARED TO STAND #17 TO THE WEST WHICH IS QUITE DAMP. THIS IS VERY NICE REGEN WITH DIAMETERS AVERAGING 3 - 6 INCHES.														
17	A 4	A 3	6	26	4	20	55	aspen (upland)	immature	N		30-39 years	0	
comnts Fmd : THIS STAND WAS CUT IN 1981 - 1982 ALONG WITH THE ADJACENT STAND #16. THIS PORTION OF THE SALE AREA, HOWEVER, WAS DEFINITLY WETTER. FIR AND EVEN LOWLAND BRUSH SPECIES ARE SCATTERED THROUGHOUT. DIAMETER GROWTH RATES ARE NOT AS GOOD AS IN STAND #16.

comnts Fmd : THIS STAND WAS CUT IN 1980 - 1981 ALONG WITH THE STANDS NORTH OF THE POWER LINE. THIS IS VERY NICE REGEN WITH DIAMETERS AVERAGING 2 - 6 INCHES. HARDWOOD REGEN IS MIXED IN THROUGHOUT THE STAND.

comnts Fmd : THIS STAND WAS CUT ALONG WITH THE SURROUNDING STAND #18 BACK IN 1980 - 1981. FOR SOME REASON THOUGH SCATTERED HARDWOOD RESIDUAL WAS LEFT IN THIS SMALL PORTION OF THE HARVEST AREA. REGEN VARIES FROM NICE QUALITY ASPEN TO HARDWOOD STUMP SPROUTS.

comnts Fmd : THIS IS GENERALLY LOW QUALITY NORTHERN HARDWOOD WITH ASPEN MIXED THROUGHOUT. IT WAS OBVIOUSLY INTENTIONALLY LEFT WHEN STAND #18 WAS CUT, MOST LIKELY AS A TRAVEL INFLUENCE BUFFER. AS SUCH IT SHOULD NOW BE MANAGED FOR NORTHERN HARDWOODS INSTEAD OF ASPEN. OVERALL STAND DENSITY IS STILL TOO LOW THOUGH TO WARRANT A THINNING.

comnts Fmd : THIS IS A FAIRLY LOW QUALITY STAND OF NORTHERN HARDWOOD. RED MAPLE MAKES UP A SIGNIFICANT COMPONENT OF THE STAND. MANAGE THE STAND ON AN EVENAGED BASIS BY HARVESTING NOW ALONG WITH ADJACENT STANDS #15 AND #31. THE RESULTING REGEN WILL BE PRIMARILY HARDWOOD STUMP SPROUTS ALTHOUGH SOME ASPEN WILL ALSO BE MIXED IN. ***RETENTION - LEAVE A FEW SMALL ISLANDS BUT DO NOT LEAVE ANY NEAR THE POWERLINE THAT COULD CREATE A FUTURE WINDTHROW HAZARD***

comnts Fmd : THIS IS A TRANSITIONAL STAND THAT LEADS DOWN INTO LOWLANDS TO THE NORTH. STAND WILL BE CUT ALONG WITH ADJACENT STANDS #15 AND #30. THE METHOD OF CUT IS CODED AS A FINAL HARVEST AS THE INTENT IS TO ESTABLISH A NEW EVENAGED STAND OF MIXED HARDWOOD AND ASPEN REGENERATION. ***RETENTION - THE CONIFER COMPONENT IS TO BE LEFT AS RETENTION ALTHOUGH WILDLIFE PLANS TO RETURN FOLLOWING THE HARVEST TO MANUALLY DROP SOME OF THIS RESIDUAL IN ORDER TO CREATE RABBIT HABITAT***

comnts Fmd : THIS REGENERATION RESULTED FROM WINTER CUTS THAT WERE CONDUCTED IN THE MID TO LATE 1980'S. SOME OF THIS HAS COME BACK QUITE WELL TO SWAMP HARDWOOD REGEN. SWAMP CONIFERS ARE ALSO MIXED IN AS IS TAG ALDER. MOST OF THE HARDWOOD IS ABOUT 2 - 3 INCHES IN DIAMETER.

comnts Fmd : THIS WINTER CUT WAS DONE IN 1982 - 1984. FOR SOME REASON THIS HAS NOT COME BACK VERY WELL ESPECIALLY WHEN COMPARED TO STAND #32 ADJACENT TO THE EAST. MOST OF THE CONIFER REGEN IS STILL ONLY WAIST HIGH. IT IS ENTIRELY POSSIBLE THAT THE PARENT STAND WAS JUST ESSENTIALLY A TREED BOG.

comnts Fmd : THIS IS A VERY NICE STAND OF MATURING RED AND WHITE PINE. MOST OF THE STAND IS SITUATED ON THE LOWER SLOPES OF ADJACENT UPLANDS. THERE IS NOT ENOUGH BASAL AREA TO WARRANT A THINNING AT THIS TIME. FIR AND WHITE PINE ARE COMING IN UNDERNEATH QUITE WELL. ***SEE LOCKED COMMENTS***

comnts Fmd : THIS STAND WAS CUT IN THE WINTER OF 2002. RED PINE, WHITE PINE AND OAK WERE LEFT. THE HEAVIEST AREAS OF RESIDUAL WERE ALONG THE SOUTH EDGES OF BOTH LOBES OF THE HARVEST AREA. SOME OF THESE AREAS WERE IN ESSENCE THINNINGS SO THESE TRANSITIONAL AREAS WERE INCORPORATED INTO NORTHERN PORTIONS OF THE ADJOINING STAND #36. THE HARDWOOD REGEN IS COMING IN QUITE SLOWLY. MOST OF THE STEMS ARE STILL ONLY 1 INCH IN DIAMETER. ***SEE LOCKED COMMENTS***														
38	M 6	M 1	6	79	8	100	55	northern hardwood	mature	N		20-29 years	0	
comnts Fmd : THIS IS A STAND OF MODERATE QUALITY NORTHERN HARDWOODS. BASSWOOD IS WELL REPRESENTED. NOT ENOUGH BASAL AREA HERE YET TO WARRANT A SELECTIVE HARVEST. THE WEST EDGE OF THE STAND EXPERIENCED SOME WIND THROW MOST LIKELY DUE TO THE 2007 TORNADO. ***SEE LOCKED COMMENTS***

comnts Fmd : THIS STAND OCCUPIES A STEEP RIDGE. THE QUALITY OF THE TIMBER VARIES DEPENDING ON THE EXPOSURE. ASPEN IS PRESENT BUT IS NOT WELL DISPERSED. I WOULD PREFER TO MANAGE THIS LONGTERM FOR NORTHERN HARDWOODS. THINNING ON THESE SLOPES WILL NOT BE EASY THOUGH. THE HORSE TRAIL RUNS ALONG THE SPINE OF THE RIDGE.

<p>comnts Fmd : THIS IS ACTUALLY TWO VERY SMALL STANDS COMPRISED OF A BOG AND A NARROW STRIP OF PLANTED RED PINE. THIS STAND WAS EXCLUDED FROM THE HARVEST WHEN STAND # 51 WAS CUT SO IT SHOULD MOST LIKELY CONTINUE TO BE MANAGED IN THE FUTURE AS A SEPARATE STAND.</p>

<p>comnts Fmd : I CANNOT FIND ANY CONTRACT FOR THIS HARVEST AREA. AS SUCH I AM ESTIMATING THAT THIS STAND WAS CUT IN 1992. SAWLOG SIZED OAK RESIDUAL WAS LEFT DURING THE HARVEST. UNFORTUNATELY MANY OF THESE RESIDUAL TREES BLEW DOWN DURING THE 2007 TORNADO. MOST OF THE REGEN WAS UNDAMAGED EXCEPT WHERE THE OAK CAME DOWN. THE REGEN IS AVERAGING 2 - 4 INCHES IN DIAMETER.</p>														
52	M 6	M 1	10	79	9	80	55	northern hardwood	mature	N		20-29 years	0	
<p>comnts Fmd : THIS STAND OCCUPIES A STEEP RIDGE THIS IS NOT GREAT QUALITY, ESPECIALLY ON THE WEST EXPOSURE. THERE IS ALSO QUITE A BIT OF OAK THROUGHOUT THIS STAND WHICH IS UNUSUAL FOR THIS COMPARTMENT. A TORNADO IN 2007 CAUSED SCATTERED WINDTHROW IN THIS STAND. THE HORSE TRAIL FOLLOWS THE SPINE OF THE RIDGE THROUGH THIS STAND.</p>

<p>comnts Fmd : I BELIEVE THAT THIS STAND WAS PART OF THE SAME 1981 - 1982 HARVEST OF ADJACENT ASPEN STANDS. THIS WAS A WET RUN THAT DID NOT REGENERATE VERY WELL. FIR HAS ACTUALLY COME BACK BETTER THAN THE ASPEN. IT WOULD BE BETTER TO STAY OUT OF THIS STAND IN THE FUTURE.</p>

<p>comnts Fmd : THIS STAND WAS CUT IN 1982 ALONG WITH SEVERAL ADJACENT STANDS. THIS PORTION OF THE HARVEST AREA CAME BACK WELL TO ASPEN BUT IT ALSO HAS FIR REGEN WELL REPRESENTED. THERE ARE SOME POLE SIZED FIR THAT MUST HAVE BEEN LEFT AS RESIDUAL.</p>

<p><u>Treatment Limiting Factors:</u> Too wet</p> <p>comnts Fmd : THIS IS AN ISOLATED POCKET OF HIGH GROUND THAT IS INACCESSIBLE FROM THE SOUTH. ASPEN WAS FOUND IN THIS STAND BUT IT IS WAY OVER-MATURE. IT WOULD BE BEST TO LEAVE THIS STAND AS IS FOR DIVERSITY AND WILDLIFE COVER. THE FIR WILL FILL IN AS THE ASPEN DIES OUT.</p>

comnts Fmd : THIS STAND LIES ON A FAIRLY STEEP NORTH FACING SIDE HILL. PRIMARILY IT IS COMPOSED OF RED MAPLE AND WHITE BIRCH WITH A HEAVY FIR UNDERSTORY. I CAN SEE NO BENEFIT FROM MANAGING THIS STAND IN THE FUTURE.														
72	A 3	M 1	35	17	2	0	55	aspen (upland)	immature	N		30-39 years	0	
comnts Fmd : THIS STAND WAS CUT IN 1990 - 1991. REGEN IS COMING ALONG PRETTY NICE WITH DIAMETERS RUNNING 1 - 2 INCHES.														
73	M 6	M 1	51	70	9	100	60	northern hardwood	mature	N		10-19 years	0	
comnts Fmd : THE CORE AREA OF THIS STAND IS THE NICEST HARDWOOD IN THE COMPARTMENT. UNFORTUNATELY THE EDGES HAVE A DISTINCT ASPEN COMPONENT. DUE TO THE OVERALL LOW BASAL AREAS I WOULD SUGGEST LETTING THE ASPEN DIE OUT. LOOK AT IT AGAIN MORE CLOSELY IN 10 YEARS TO SEE IF A THINNING IS WARRANTED. THERE IS A VERY STRONG POTENTIAL FOR RED SHOULDERED HAWK IN THIS STAND.														
74	A 6	F 1	8	34	6	80	55	aspen (upland)	immature	N		10-19 years	0	
comnts Fmd : THIS STAND WAS MANUALLY CUT FOR HABITAT IMPROVEMENT IN 1973. THE REGEN IS GROWING VERY WELL AND HAS NOW REACHED MERCHANTABLE SIZE CLASS. THE SOUTH PORTION ALONG THE EDGE OF STAND #76 HAS QUITE A LOT OF FIR MIXED IN. A 2007 TORNADO CREATED A LOT OF WIND DAMAGE IN THIS STAND. THE WORST AREA OF BLOW DOWN WAS DELINEATED AS STAND #75.														
75	A 5	A 2	2	34	6	40	55	aspen (upland)	immature	N		10-19 years	0	
comnts Fmd : THIS STAND WAS PART OF THE SURROUNDING STAND #74 UNTIL A 2007 TORNADO CAUSED SEVERE WIND DAMAGE TO THIS PORTION OF THAT STAND. NOT ALL OF THE STAND WAS LAYED DOWN BUT A SUBSTANTIAL PORTION OF IT WAS. I DO NOT IMAGINE THAT ANYONE WILL WANT TO SALVAGE SMALL DIAMETER ASPEN SO WE WILL JUST LET IT GO AND MANAGE TOGETHER WITH THE ADJACENT STAND #74.

Treatment Limiting Factors: Too wet Inadequate volume due to low stocking/small diameter/etc.														
comnts Fmd : SOME MATERIAL WAS REMOVED FROM THIS STAND IN 1983. THE MAJORITY OF THE STAND THOUGH IS SCATTERED SWAMP CONIFERS WITH A HEAVY TAG ALDER UNDERSTORY. THE WESTERN TIP WAS DAMAGED BY THE 2007 TORNADO. SOME OF THAT BLOW DOWN MIGHT GET SALVAGED BY FIREWOOD CUTTERS. IF NOT THE BLOWDOWNS WILL SERVE AS GOOD WILDLIFE HABITAT.														
77	W 5	F 1	1	73	9	60	60	white pine	immature	N		not scheduled	0	
comnts Fmd : THIS USE TO BE A NICE SMALL STAND OF WHITE PINE POLE TIMBER. THE 2007 TORNADO CAUSED QUITE A LOT OF DAMAGE TO THE STAND. MANY OF THE TREES WERE LEFT STANDING BUT THEY RECEIVED A LOT OF TOP DAMAGE.														
78	A 0	G 0	6	0	0	0	55	aspen (upland)	in process of regeneration	N		50-59 years	0	
comnts Fmd : THIS STAND WAS HIT VERY HARD BY THE 2007 TORNADO. VERY FEW TREES WERE LEFT STANDING AND THOSE THAT WERE ARE GENERALLY DAMAGED. FIREWOOD CUTTERS WILL BE SALVAGING A LOT OF THE BLOW DOWN. THIS WILL ESSENTIALLY BECOME A SMALL CLEARCUT AREA THAT SHOULD REGENERATE WELL TO A MIX OF ASPEN AND HARDWOOD REGEN..														
79	M 4	U 0	8	79	7	30	50	northern hardwood	sparse	N		not scheduled	0	
comnts Fmd : THIS IS A PATCHY SEMI-OPEN STAND WITH SCATTERED TIMBER THROUGHOUT. HARDWOOD REGEN IS SLOWLY FILLING IN WITH A VERY NOTICABLE AMOUNT OF OAK REGEN ALSO PRESENT.

comnts Fmd : THIS IS A MIXED STAND OF GENERALLY LOW QUALITY HARDWOODS. THE STAND OCCUPIES A RIDGE BUT IT IS NOT SO STEEP THAT IT WOULD BE INOPERABLE. THERE IS VERY LITTLE ASPEN IN THIS STAND SO I WOULD PREFER TO LET IT DEVELOP NATURALLY UNTIL THERE IS ENOUGH BASAL AREA TO WARRANT A THINNING. THE STAND EXTENDS SOUTH OF THE POWERLINE AS STAND #82.

comnts Fmd : THIS IS A MIXED STAND OF GENERALLY LOW QUALITY HARDWOODS. THE STAND OCCUPIES A RIDGE BUT IT IS NOT SO STEEP THAT IT WOULD BE INOPERABLE. THERE IS SOME ASPEN IN THE SOUTHERN PORTION OF THE STAND THAT WE MIGHT BE ABLE TO INCLUDE WITH THE HARVEST OF STAND #83 TO THE EAST. I WOULD PREFER TO LET THE REMAINDER OF THE STAND DEVELOP NATURALLY UNTIL THERE IS ENOUGH BASAL AREA TO WARRANT A THINNING. THE STAND EXTENDS NORTH OF THE POWERLINE AS STAND #80.

comnts Fmd : THIS IS A NICE STAND OF ASPEN THAT SHOULD BE CUT SOON. IT LIES ADJACENT TO A HARDWOOD RIDGE TO THE WEST AND IT SHOULD REGENERATE VERY WELL TO A MIX OF ASPEN AND RED MAPLE. THE STAND EXTENDS TO THE NORTH OF THE POWERLINE AS STAND #86. WHEN SETTING UP THIS STAND EXPLORE THE POSSIBILITY OF EXPANDING THE SALE AREA INTO STAND #82 IF MANAGEABLE AMOUNTS OF ASPEN EXIST IN THAT STAND. ***RETENTION - LEAVE SMALL ISLANDS BUT DO NOT LEAVE ANY NEAR THE POWERLINE THAT COULD CREATE A FUTURE WINDTHROW HAZARD***

comnts Fmd : THIS IS A TRANSITIONAL STAND THAT IS DRY. ALTHOUGH THERE IS AN ASPEN COMPONENT IN THE STAND I WOULD PREFER NOT TO CUT IT. I WOULD NOT WANT TO ENCOURAGE NEW ASPEN REGENERATION DUE TO THE STAND'S PROXIMITY TO AN OLD BEAVER FLOODING. I BELIEVE THAT FISHERIES DIVISION WOULD PREFER THAT THIS STAND BE ALLOWED TO CONVERT TO A SWAMP CONIFER STAND.

89	M 4	F 1	4	68	8	30	55	northern hardwood	sparse	N		not scheduled	0	
comnts Fmd : THIS STAND WAS NOT CUT WHEN THE ADJACENT STAND #88 WAS. MOST LIKELY IT WAS LEFT TO BUFFER THE WILDLIFE OPENING. UNFORTUNATELY A LOT OF THE RESIDUAL TREES BLEW DOWN DURING THE 2007 TORNADO.

<p>comnts Fmd : THIS STAND WAS CUT IN THE WINTER OF 2002. SOME AREAS ARE DOING WELL BUT OTHERS CLOSER TO THE ADJACENT LOWLANDS ARE STRUGGLING SOMEWHAT. FIR IS ALSO SEEDING IN SO THIS WILL BECOME A MIXED STAND. THE BEST ASPEN IS AVERAGING ABOUT 10 - 15 FEET TALL.</p>

<p><u>Treatment Limiting Factors:</u> Other Dept./Div. procedures or practices (describe in comment)</p> <p>comnts Fmd : THIS STAND MIGHT BE MANAGABLE ALTHOUGH ACCESS WOULD BE DIFFICULT. SINCE THIS STAND WAS NOT CUT WHEN THE ADJACENT STAND #95 WAS I WOULD GUESS THAT IT MIGHT BE BETTER TO JUST LET THIS NOW CONVERT TO CONIFERS. THIS WOULD ALSO BE THE BEST MANAGEMENT STRATEGY FROM THE PERSPECTIVE OF FISHERIES DIVISION GIVEN THE CLOSE PROXIMITY OF THIS STAND TO STONEY CREEK AND THE MILLIGAN.</p>
