comnts Fmd : SCA This stand consists primarily of stunted black spruce and tamarack but also has a small area of black spruce poles. Stocking varies from S1 to S5. This stand is part of a vast wetland complex that consist of large remnant hardwood, hemlock, aspen and black spruce "islands" surrounded by bog. Stands within this large complex have remained essentially untouched since the turn of the century, contain many habitat elements such as supercanopy trees, numerous large snags, abundant and varied tree cavities/dens, frequent large diameter downed trees, and intact natural ecosystem processes/disturbances. It is an excellent candidate for potential old growth.
