

Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
6124 - Lowland Spruce-Fir	Medium Density Pole	23.6	71	1-50	Poor quality lowland conifer stand. Short trees not much volume. Very wet.
6124 - Lowland Spruce-Fir	High Density Sapling	20.2	24		This stand is a wetter portion of the stand to the south. It has more conifer than the other stand. Regen not as vigorous as the trees to the south.
4112 - Maple, Beech, Cherry Association	High Density Sapling	28.4	24		Maple regen doing good, some large over topping white pine but not enough to make it a multi-storied stand.
6120 - Lowland Cedar	High Density Pole	43.3	111		Some decent cedar poles and some cedar regen.
6129 - Mixed Coniferous Lowland Forest	Medium Density Pole	34.2	52		Wet, poor quality stand.
6120 - Lowland Cedar	High Density Sapling	32.0	40		Extremely dense young cedar stand.
4134 - Aspen, Spruce/Fir	High Density Sapling	8.4	12		Decent regen, spotty in some areas. Heavier spruce and balsam in the southern area of the stand.
4134 - Aspen, Spruce/Fir	High Density Sapling	27.4	33		Nice aspen stand, on the edge between A3-A6.
4191 - Mixed Upland Deciduous with Conifer	High Density Pole	3.8	51	51-80	Mixed stand not very thick. Look at cutting next entry.
4140 - Other Upland Deciduous	High Density Pole	5.0	63		Some decent birch trees, nice riparian area along wetlands.
4134 - Aspen, Spruce/Fir	High Density Sapling	9.6	17		Really nice aspen stand. less conifer than other stands in the area.
42350 - Upland Hemlock	Medium Density Log	35.0	95	51-80	Some nice hemlock regen.
6120 - Lowland Cedar	Medium Density	4.1	88		Decent cedar stand, better than others in the area.
6120 - Lowland Cedar	Low Density Sapling	235.4	20		Last entry this was called an L type. It now has enough cedar regen to make a forested stand.
6117 - Lowland Deciduous, Mixed Coniferous	High Density Pole	36.5	85		Nice looking birch-aspen-balsam. Stand is blocked by large cedar stand and S. Branch of the Carp River and tributaries. The stand info is from a flight Amy Douglas did last year.
6121 - Tamarack	Medium Density	5.9	42		Young tamarack stand in the middle of nowhere!
6112 - Lowland Aspen	High Density Pole	17.5	68		Stand is wet and inaccessible. Blocked by the headwaters of the Carp River and large tracts of wet Cedar.

	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
25	4112 - Maple, Beech, Cherry Association	High Density Log	58.1	72	51-80	Stand still has adequate crown spacing, regen doing good.
26	4130 - Aspen	Medium Density	68.2	24		Regen doing great.
33	4134 - Aspen, Spruce/Fir	Medium Density	3.9	7		Stand coming back in ok. A few wet areas were the regen in less dense than the rest of the stand.
34	6117 - Lowland Deciduous, Mixed Coniferous	Medium Density Pole	12.0	75		Stand could be cut but is inaccessible. Ice road to stand no longer exists and a pretty good flow of water through a drainage into the stand. It doesn't give an opportunity to use a bridge.
36	6120 - Lowland Cedar	High Density Sapling	58.4	91		Decent cedar, smaller diameters to south and west.
37	6124 - Lowland Spruce- Fir	Medium Density	35.5	3		Regen variable, but doing good
38	42340 - Upland Spruce/Fir	High Density Sapling	30.5	26		Thick spruce/fir regen. Some aspen and birch. White pine regen in the more open areas.
39	4112 - Maple, Beech, Cherry Association	High Density Log	40.0	77	111-140	Stand needs to be thinned again, some areas have much higher basal areas than others.
40	6120 - Lowland Cedar	High Density Pole	22.8	82		Nice open pole stand.
41	4130 - Aspen	High Density Sapling	15.8	7		Regen doing great. About 5'-10' tall!
42	4130 - Aspen	High Density Sapling	13.7	13		Stand is doing very good, nice aspen.
43	4130 - Aspen	High Density Sapling	15.8	7		Regen doing Great.
44	4130 - Aspen	High Density Sapling	23.4	13		Regen doing Great
45	4130 - Aspen	High Density Sapling	18.8	7		Regen doing great.
46	4130 - Aspen	High Density Sapling	21.6	13		Regen doing great.
47	4130 - Aspen	High Density Sapling	27.1	7		Regen doing great.
48	4130 - Aspen	High Density Sapling	140.4	28		Really nice aspen stand.
49	42340 - Upland Spruce/Fir	Low Density Pole	16.5	44		This is a grassy opening that is growing in. Harvest the trees in it to maintain the opening.

FORESTED STAND LISTING REPORT

Compartment: 112

Inventory Method: IFMAP

Date 08/11/2009

	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
50	6120 - Lowland Cedar	High Density Pole	383.7	92		Variable cedar stand. Some areas have younger cedar but unable to pick out on the imagery.
51	4111 - S.Maple, Hard Mast Association	High Density Log	32.9	83	111-140	Stand was thinned last entry but can be thinned again. Remove most of the beech. Harvest should extend into the compartment to the north.
