

Compartment Review Presentation

Baraga Forest Management Unit

Compartment 11044

Entry Year 2018

Acreage: 1,962

County Houghton

Management Area: Central Houghton

Revision Date: 2016-05-09

Stand Examiner: Jason Mittlestat

Legal Description:

Elm River Township
T51N, R35W, Sections 17
Laird Township
T51N, R35W, Sections 16, 19, 20 and 21

Identified Planning Goals:

To maintain a healthy sustainable forest with special consideration to wildlife and fisheries habitat.

Soil and topography:

There are some steep hills along the rivers and streams. The remainder of the land is level to rolling. Soils are combinations of: Munising loamy fine sand and fine sandy loam, Yalmer sandy loam, Liminga fine sand, Alcona loamy fine sand, Graveraet loam, Kalkaska sand, Halfaday-AuGres sands, Sturgeon silt loam, Arnheim silt loam and Pelkie fine sand.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

State land borders the compartment the north, east and west. Several small parcels of private ownership border the compartment to the south where some of the owners have harvested timber from their parcels, but the majority of the private owners use their land as homes or for recreational purposes. The land to the northeast is owned by three different land management companies with primary goals of timber management.

Unique Natural Features:

MNFI indicates the potential for Red Shouldered Hawk, Eagle, Osprey, Great Blue Heron rookery, Goshawk, Moose and Gray Wolf in the compartment. There is also potential for Wood Turtle along riparian corridors.

Archeological, Historical, and Cultural Features:

none.

Special Management Designations or Considerations:

BMP guidelines should be followed around the intermittent streams, Otter river and Bruno creek watercourses.

Watershed and Fisheries Considerations:

The streams in this compartment are cold water trout streams. There is a concern about bank erosion and stream crossings.

Wildlife Habitat Considerations:

Managing habitat for; black bear, blackburnian warbler, pileated woodpecker, ruffed grouse, northern goshawk and American marten should be considered when planning harvest specifications in this this compartment. There is also a deer wintering complex in this compartment.

Mineral Resource and Development Concerns and/or Restrictions

Surface sediments consist of coarse textured glacial till. There is insufficient data to determine the glacial drift thickness. The Precambrian Jacobsville Sandstone subcrops below the glacial drift. The Jacobsville was previously used as a building stone. A gravel pit is located in Section 17 and there should be potential. Limestone quarries are located two miles to the east, but the outlier formation is not present here. Abandoned copper mines and crushed basalt piles are located eight miles to the northwest. This area has not been previously leased for metallic exploration. There is no economic oil and gas production in the UP.

Vehicle Access:

The Pike Lake Road is a county road which passes through section 19, The Beaver Creek Road starts north of the Otter River on the Pike Lake Road and heads east across Beaver Creek and through sections 19, 20 and 17 where it ends south of Bruno Creek. Access to the lands north of Bruno Creek can be obtained through a series of logging roads which

head south from the Hazel Swamp Road. There is no formal access to the lands south of the Otter River.

Survey Needs:

None identified at this time, will be addressed as needed in the future.

Recreational Facilities and Opportunities:

The Otter River and Bruno Creek water courses offer some excellent fishing opportunities. The large expanse of continuous forest offer great hunting opportunities for both large and small game.

Fire Protection:

This compartment has little to no potential for a large fire with the primary cover type being northern hardwoods. Equipment access would be the primary issue for fire suppression activities.

Additional Compartment Information:

The following reports from the Inventory are attached:

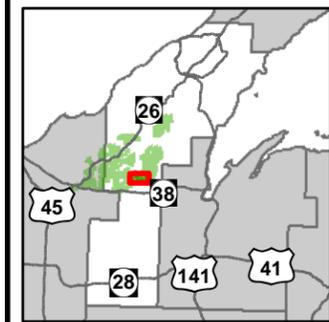

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

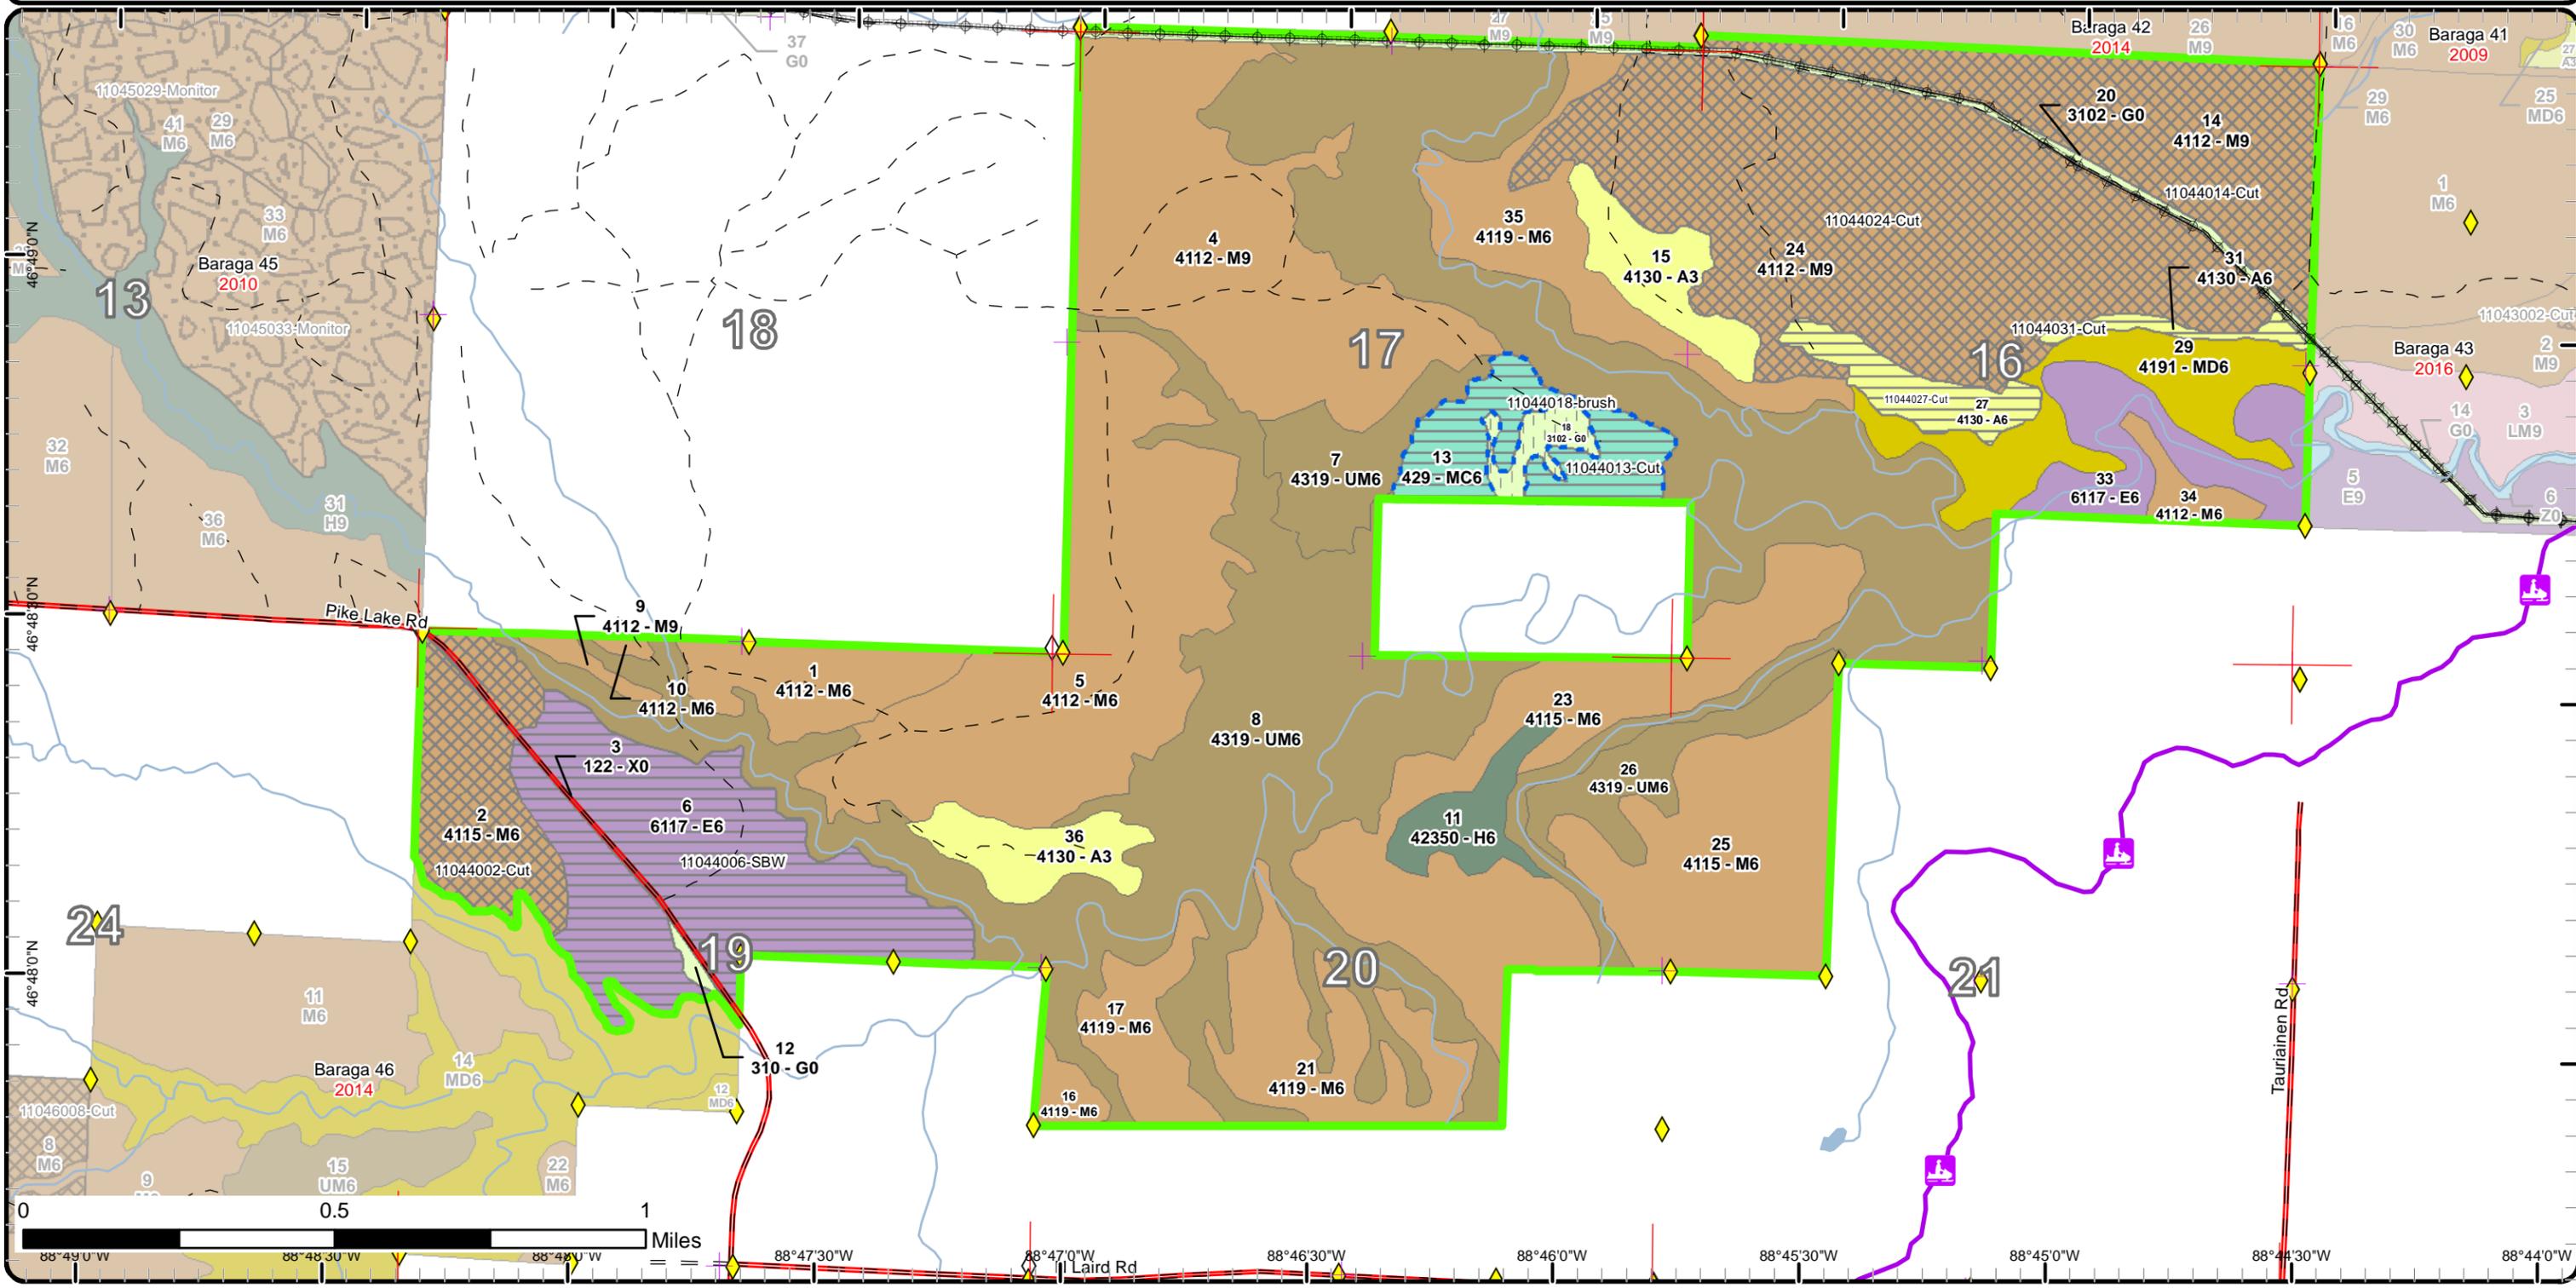

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Stand	Treatment Name	Acres	Stand CoverType	Size Density	Stand Age	BA Range	Treatment Type	Treatment Method	Cover Type Objective	Age Structure	Approval Status
2	11044002-Cut	51.8	4115 - Y.Birch, Hemlock NH	Poletimber Well	82	111-140	Harvest	Single Tree Selection	411 - Northern Hardwood	Uneven-Aged	Proposal

Habitat Cut: No**Site Condition:**

Prescription Selectively thin hardwoods to 70-90 square feet of basal area. Favor oak, hemlock, white pine and cedar where present. Oak should be released on 3 sides to an average BA of 60 sqft. Where 30 sqft or more of hemlock occurs thin to less than 100 sqft of BA. Follow all guidelines set forth in "The Complete Marker".

Next Step Monitoring, Natural Regen (Re-Inventory)

Treatments:

Acceptable Any combination of the original stand's over story species prior to harvest.

Regen:

Other Retention for this stand will be greater than 3% and will consist of tree species of the dominant cover type and reserve tree species.

Comment:

Proposed Start Date: 10/01/2017

6	11044006-SBW	122.1	6117 - Lowland Deciduous, Mixed Coniferous	Poletimber Well	82	81-110	Harvest	Clearcut with Retention	611 - Lowland Deciduous Forest	Even-Aged	Proposal
---	--------------	-------	--	-----------------	----	--------	---------	-------------------------	--------------------------------	-----------	----------

Habitat Cut: No**Site Condition:**

Prescription Harvest all species down to 4.6 inches DBH except hemlock, cedar, black cherry and white pine. Also, reserve red oak if present. All yellow birch 20" DBH and greater shall be retained.

Next Step Monitoring, Natural Regen (Re-Inventory)

Treatments:

Acceptable Any combination of the original stand's over story species prior to harvest.

Regen:

Other Retention for this stand will be greater than 3% and will consist of tree species of the dominant cover type and reserve tree species.

Comment:

Comment:

Proposed Start Date: 10/01/2017

14	11044014-Cut	93.6	4112 - Maple, Beech, Cherry Association	Sawtimber Well	88	111-140	Harvest	Single Tree Selection	411 - Northern Hardwood	Uneven-Aged	Proposal
----	--------------	------	---	----------------	----	---------	---------	-----------------------	-------------------------	-------------	----------

Habitat Cut: No**Site Condition:**

Prescription Selectively thin hardwoods to 70-90 square feet of basal area. Favor oak, hemlock, white pine and cedar where present. Oak should be released on 3 sides to an average BA of 60 sqft. Where 30 sqft or more of hemlock occurs thin to less than 100 sqft of BA. Follow all guidelines set forth in "The Complete Marker". If areas heavy to (oak, aspen, dieback, ash, or hemlock) 1-5 acres are found, seed tree harvest with a residual 10-30 sq ba of oak, reserving hemlock, cedar and pine. Winter cut only (December 1st to March 31st) on one ~40 acre payment unit, preferably on the eastern part of the stand.

Next Step Monitoring, Natural Regen (Re-Inventory)

Treatments:

Acceptable Any combination of the original stand's over story species prior to harvest.

Regen:

Other Retention for this stand will be greater than 3% and will consist of tree species of the dominant cover type and reserve tree species.

Report 6 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

Report 7 – EXISTING SPECIAL CONSERVATION AREA DETAILS

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Cold Water Lake	A coldwater lake has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species to persist from year to year. Suitable conditions for coldwater fishes may occur in Michigan lakes if they are relatively deep, have substantial groundwater inflows, or are located in colder (northern) areas of the state. Such lakes are established by Director's action and designated as trout resources by Fisheries Order 200.
SCA	Cold Water Stream	A coldwater stream has temperature and dissolved oxygen conditions that allow naturally-reproduced or stocked trout populations and those of other coldwater fish species (e.g., slimy sculpin) to persist from year to year. Coldwater streams in Michigan typically provide these conditions due to substantial contributions of groundwater to their stream flows. Such streams are established by Director's action and designated as trout resources by Fisheries Order 210.
SCA	Riparian Area	A transitional area between aquatic and terrestrial ecosystems in which the terrestrial ecosystem influences the aquatic ecosystem and vice-versa. Because of the unique conditions adjacent to lakes, streams and open water wetlands, riparian areas harbor a high diversity of plants and wildlife. Riparian communities are ecologically and socially significant in their effects on water quality and quantity, as well as aesthetics, habitat, bank stability, timber production, and their contribution to overall biodiversity.

	Level 4 Cover Type	Size Density	Acres	Stand Age	BA Range	General Comments:
1	4112 - Maple, Beech, Cherry Association	Poletimber Well	31.1	74	81-110	Some die back along roads and south edge of stand 2/2/2016.
2	4115 - Y.Birch, Hemlock NH	Poletimber Well	51.8	82	111-140	
4	4112 - Maple, Beech, Cherry Association	Sawtimber Well	139.4	87	51-80	cut in the fall and winter 2010-2011 as "Goldie Locks Hardwoods" 11-010-10-01
5	4112 - Maple, Beech, Cherry Association	Poletimber Well	151.6	81	81-110	Some areas of top dieback along roads and river banks.
