

Compartment Review Presentation

Roscommon Forest Management Unit

Compartment 71038

Entry Year 2021

Acreage: 6,537

County Roscommon

Management Area: Ogemaw Hills

Revision Date: 2019-06-12

Stand Examiner: Jason Lewicki

Legal Description:

T24N, R02W Sections 27 and 34.

T23N, R02W Sections 2, 3, 10, 11, 13, 14, 15, 22, 23, 24 and 26.

Identified Planning Goals:

Vegetation management in the AuSable Outwash management area (MA) (Figure 4.25.1) will provide forest products; maintain or enhance wildlife habitat; protect areas of unique character including several state wildlife area floodings, the Roscommon Forest Fire Experiment Station, threatened, endangered and special concern species; and provide for forest-based recreational uses. Timber management for this 10-year planning period will focus on improving the age-class structure of aspen, harvesting older jack pine and regeneration of red pine and oak to help balance age-classes. Wildlife habitat management objectives include perpetuating early-successional communities for species adapted to young forests for hunting and other wildlife-related recreation opportunity and management of the state wildlife management areas. Expected trends within this 10-year planning period are an increase in non-native exotic plants, especially Phragmites in the wetland areas and increased recreational pressure.

Soil and topography:

Topography is generally flat with some areas of rolling hills.

Soils in the uplands consist of Greycalm-Grayling, Greycalm-Klacking and Croswell sands.

Ownership Patterns, Development, and Land Use in and Around the Compartment:

Much of the compartment and surrounding area is under State ownership. Lake St. Helen lies just to the east of the compartment boundaries where much of the surrounding land is privately owned.

Unique Natural Features:

None known

Archeological, Historical, and Cultural Features:

None known

Special Management Designations or Considerations:

Compartment contains a large portion of the 9 Mile Complex Ecological Reference Area

Watershed and Fisheries Considerations:

Lake St. Helen, Russell Lake and the South Branch of the AuSable River lie just to the East of the compartment.

Wildlife Habitat Considerations:

Mineral Resource and Development Concerns and/or Restrictions

Sections 2-4, 10-11, 13-15, 22-24, & 26, T23N-R2W and sections 27 & 34, T24N-R2W, Roscommon County
Two active sand & gravel pits are in the area including the St. Helen/Carter Pit, which is in the compartment and currently leased by Payne & Dolan. Nine Mile Pit to the west is also leased to Payne & Dolan. There is good potential for additional sand & gravel within the compartment on the upland areas. The St. Helen oil and gas field is located about one mile northeast of the compartment. The St. Helen field, like most other Detroit River (Richfield) fields in this area, is structurally controlled. The field is undergoing secondary recovery operations currently and is unlikely to expand. All the state-owned mineral rights within the compartment and much of the surrounding area are currently under lease. These leases were originally acquired by Marathon in a 2014 auction as they pursued unconventional development of the Lucas Formation (Richfield zone). Marathon has since abandoned their plans. Marathon's remaining leases were recently acquired by CORE Energy. It is not known whether CORE intends to develop the leases in this area or let them expire next year. The state does not own all the mineral rights within the compartment. Because the mineral estate is the dominant estate, reasonable access to the surface must be provided to private owners if they choose to explore or develop their mineral

rights. There is no known metallic mineral potential in this part of the state.

Vehicle Access:

Vehicle access is very good on the uplands with multiple dirt county roads and forest access routes. There is an area within sections 23 and 24 that is closed to vehicular traffic and is blocked with a gate.

Survey Needs:

None needed at this time.

Recreational Facilities and Opportunities:

The designated Geels 50" ATV Trails are present within most of the compartment. Dispersed recreation is popular throughout the compartment from the access to water resources and varying cover types offering hunting and gathering opportunities.

Fire Protection:

Fire occurrence history is low in this compartment with small amounts of high hazard fuel types. There is low land in this compartment that could cause accessibility issues for fire suppression but most of the high ground is accessible. There are some private holdings within the compartment.

Additional Compartment Information:

The following reports from the Inventory are attached:

- Total Acres by Cover Type and Age Class**
- Cover Type by Harvest Method**
- Proposed Treatments – No Limiting Factors**
- Proposed Treatments – With Limiting Factors**
- Stand Details (Forested and Nonforested)**
- Dedicated and Proposed Special Conservation Areas**
- Site Condition Details**

The following information is displayed, where pertinent, on the attached compartment maps:

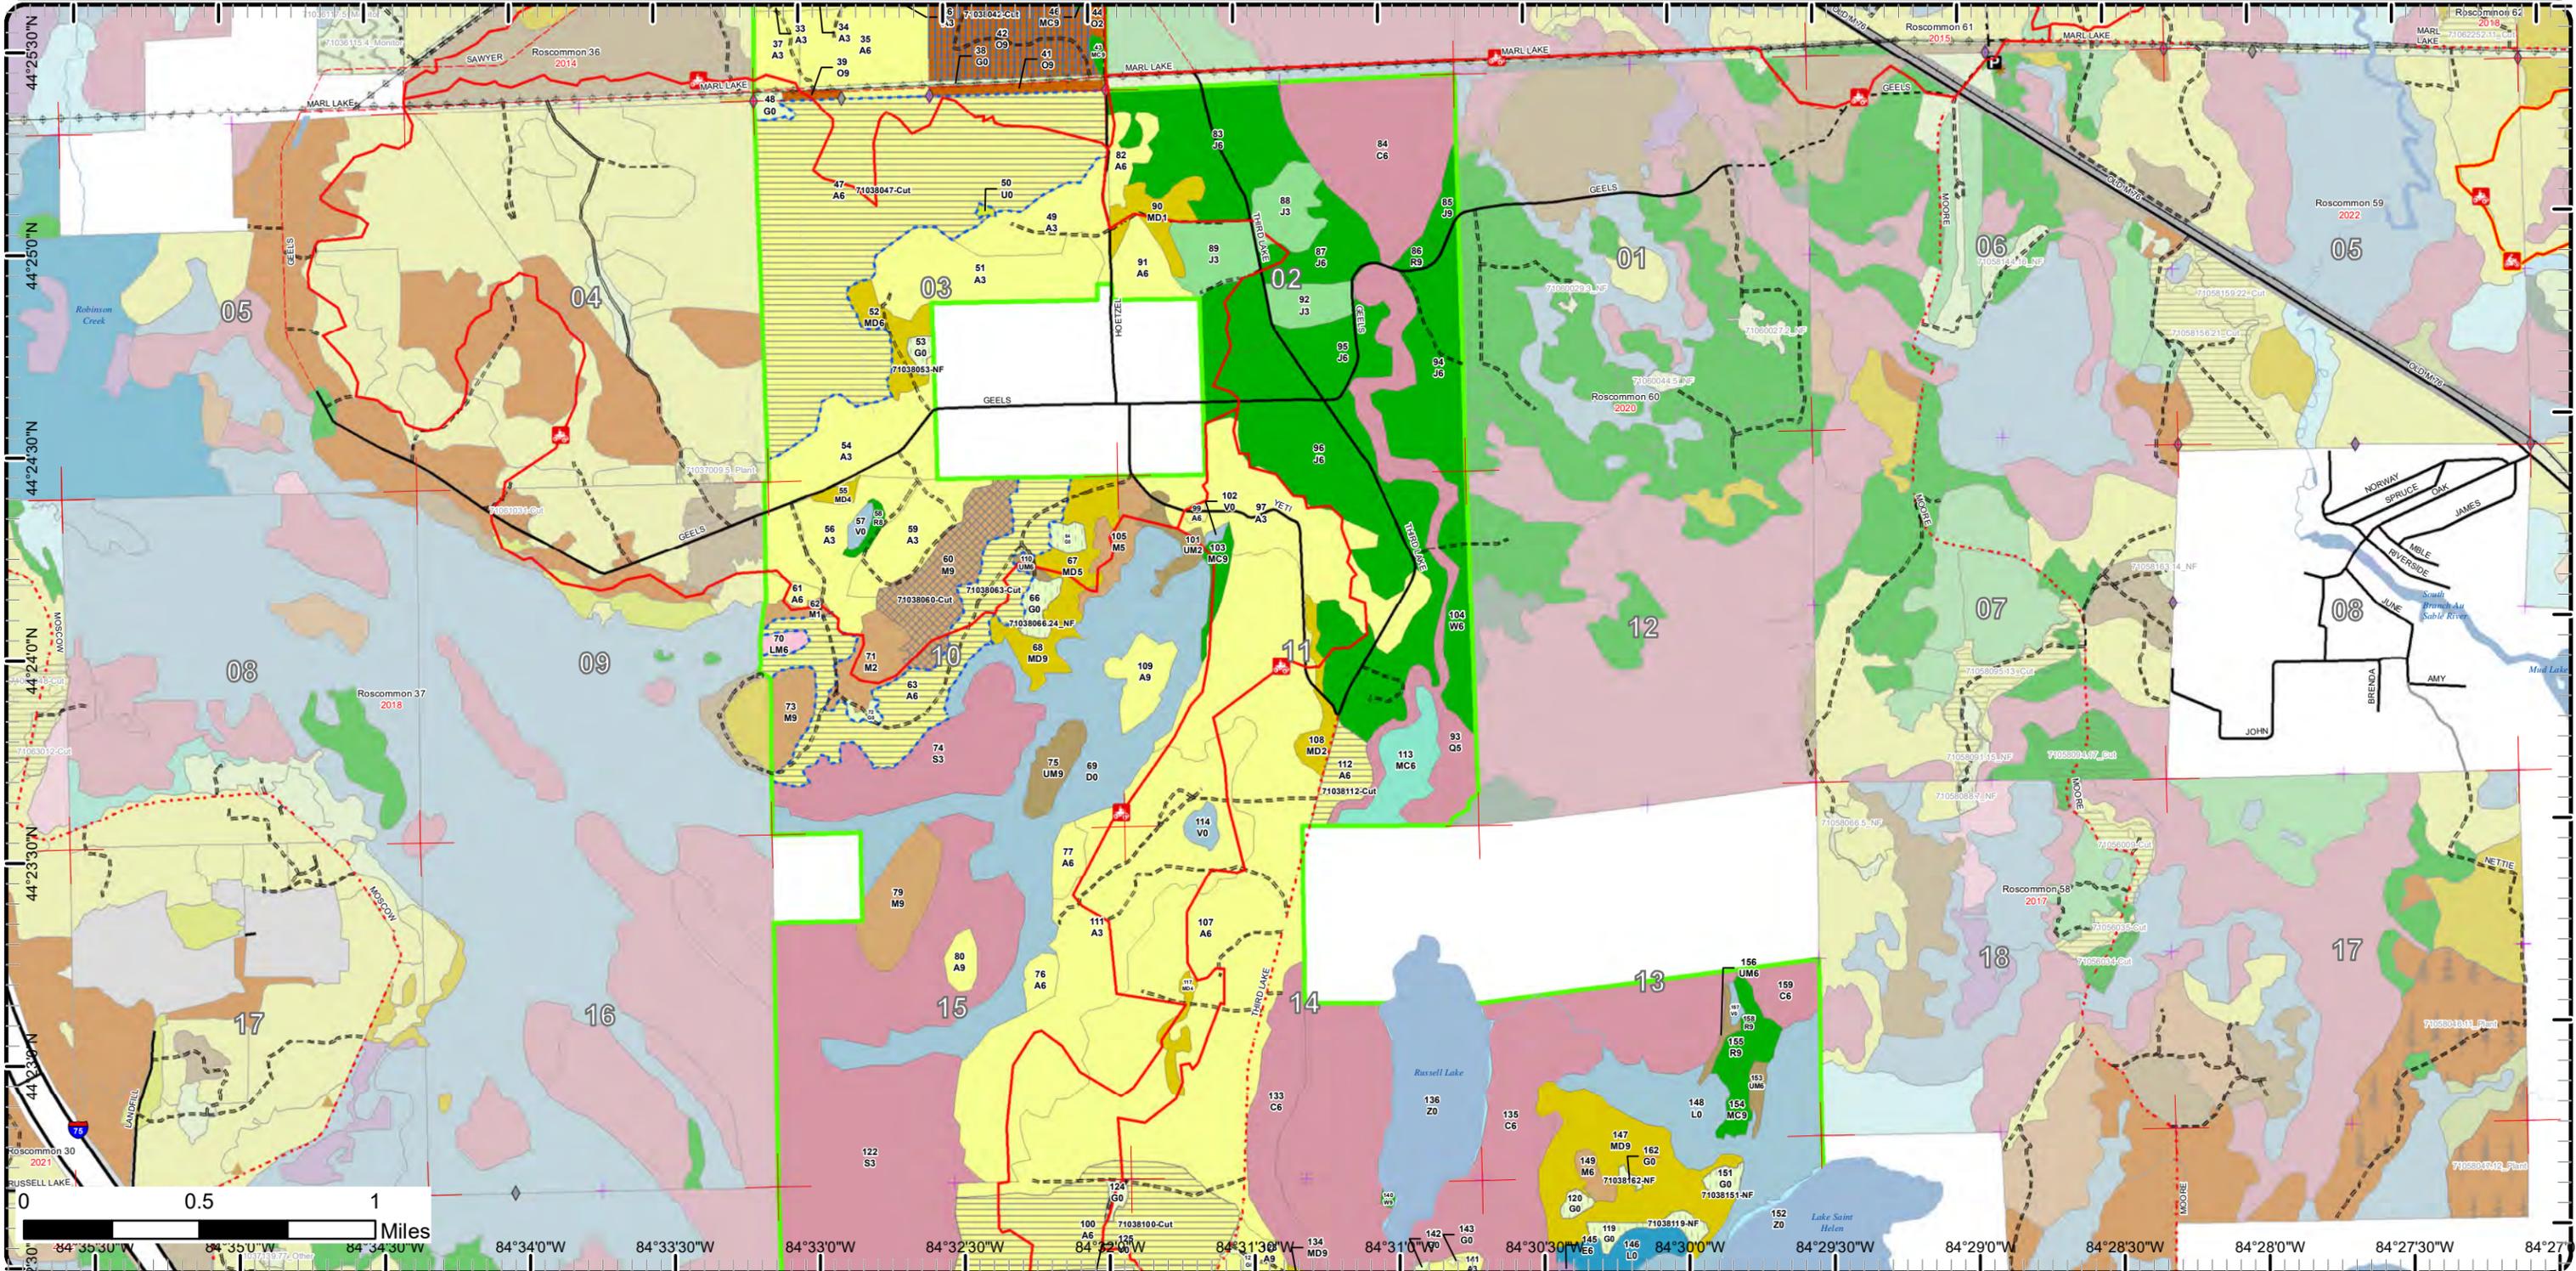

- Base feature information, stand boundaries, cover types, and numbers**
- Proposed treatments**
- Site condition boundaries**
- Details on the road access system**

Report 5 – PROPOSED SPECIAL CONSERVATION AREA* (SCA) DETAILS

* This is a partial list of SCAs for this compartment. Not included are those areas identified under other Department initiatives (Natural Rivers, Deer Wintering Areas, etc.). Those will be identified in separate, future map and report products.

SCA Name	SCA Category	Detail Type	Recommendation	Acres
----------	--------------	-------------	----------------	-------

Comments

**Report 6 – EXISTING SPECIAL CONSERVATION AREA DETAILS**

* This is a list of SCA's for this compartment along with a 1/4 mile buffer surrounding the compartment. Refer to the Special Conservation Area Map for locations of the below listed Conservation Areas.

ERA = Ecological Reference Area
 HCVA = High Conservation Value Area
 SCA = Special Conservation Area

Conservation Area	Type	Description
SCA	Research and Military Areas	These areas provide facilities and lands specifically dedicated for research, or other purposes. They include the 5,847 acre Forest Fire Experiment Station, the 12,000 acre Houghton Lake Wildlife Research Area, the Beaver Islands Archipelago Wildlife Research Area (that includes most of Garden Island, all of High and Hog Islands, all state owned land on Beaver, South Fox and North Fox Islands), the Cusino Wildlife Research Area, the 3,000 acre Hunt Creek Fisheries Research Station, the 125 acre Wyman Nursery, and over 144,000 acres of Military Lands.
HCVA	Natural Rivers	There are two Natural Rivers datasets which are derived from spatial buffers set from an established and approved distance from the river centerlines. The Natural Rivers Zoning District is a 400 foot buffer for most Natural Rivers. The Vegetative Buffer ranges from 25 to 100 feet. To view specific Zoning Districts and Vegetative Buffers for each Natural River see the table located on the I:\Documentation\GDSE data folder.
ERA	Ecological Reference Areas	Ecological Reference Areas (ERAs) are high quality examples of natural communities that have been identified as Element Occurrences (EOs) by the Michigan Natural Features Inventory (MNFI) within the context of their natural community classification system. Element Occurrences with viability ranks of A (Excellent) or B (Good) and a Global (G) or State (S) element (rarity) ranking of endangered (1), threatened (2), or rare (3) serve as an initial base of ERAs. They may be located upon any ownership in the State. The system is comprised of individual or associations of natural community types that are managed for restoration and maintenance of natural ecological processes and values. The public may submit recommendations for lands as ERAs using the DNR Conservation Area Recommendation Form.
